

SUNRISE ERP — ADMISSION DEMO GUIDE

Complete Digital Admission Dossier & Automated Institutional Enrollment

System: Sunrise Public School ERP v2.0
Specification: CBSE & Institutional Standard
Security: §15 Health Gated / Multi-Tenant Scoped

Fundamental Architectural Invariant: Application 360° = Complete Digital Admission Dossier

Core Principle: Application 360° is *not* merely a read-only applicant summary or assessment console. It is the school's **Complete Digital Admission Dossier** allowing the Admission Cell to input, review, and persist all 11 CBSE statutory sections. Furthermore, successful application-fee payment serves as the **single, atomic trigger** for student enrollment: it generates the permanent institutional Admission Number, allocates the balanced section, assigns the roll number, creates student & parent logins, and migrates verified documents in a 100% all-or-nothing database transaction.

The 10-Tab Digital Admission Dossier Console Architecture

Database Model & Serialization Verification Matrix

Verified database models and serialization mapping across backend APIs and frontend dossier components:

DOSSIER SECTION	UNDERLYING DB TABLE	AUTHORITATIVE COLUMNS	SERIALIZATION & API GATING
Student Personal	applications	first_name, middle_name, last_name, date_of_birth, gender, nationality, religion, caste_category, mother_tongue, aadhaar_last4	Directly serialized on _detail(); aadhaar strictly restricted to last 4 digits.
Preferences	applications	class_applying_for, stream, second_language, optional_subject, preferred_section, transport_required	Preserves optional subjects and section preferences for balance allocator.
Parents & Guardians	application_guardians	relation, full_name, date_of_birth, qualification, occupation, designation, organisation, annual_income_band, office_address, mobile, email	Fully serialized via _guardian_out(); guarantees zero data loss on modal reload.
Siblings & Claims	application_siblings	student_id, name, age, school_name	Links to real students.id; validated by refresh_claims().
Address & History	applications	address (JSON), previous_school (JSON)	Handles both line1 and address_line_1 defensively; TC details stored.
Medical (\$15)	application_medicals	blood_group, known_allergies, chronic_conditions, regular_medication, emergency_doctor, consent_for_emergency_treatment	Separately gated by admission.medical.read; receptionist access refused.
Declarations	applications	declarations (JSON)	Stores parent_signature_name, accuracy acceptance, and declaration timestamp.
Enrollment Result	students & enrolments	students.admission_no, enrolments.class_section_id, enrolments.roll_no	Resolved dynamically in _detail() whenever student_id is populated.
